TABLE OF CONTENTS

APPENDICES

1 SUMMARY

The Winter Springs Marketplace project is a 10.23-acre development located at the southwest corner of State Road 434 and Tuskawilla Road in Winter Springs, Florida (Sections 1 & 6, Township 21 South, Ranges 30 & 31 East). See **Appendix A** for the limits of the project site superimposed on a general location map, aerial imagery, the USGS Quad map, and Map No. 12117C0160F of the FEMA Flood Insurance Rate Map (FIRM), effective date September 28, 2007.

The proposed commercial property consists of six (6) commercial buildings and associated surface parking and utility infrastructure. The majority of the site is currently undeveloped and vacant. There is an existing abandoned building and surface parking lot located at the eastern corner of the site. The eastern portion of the site has been previously permitted through St. John's River Water Management District (SJRWMD) under Permit No. 83445-1 for the outfall to the drainage structure immediately south of the site's Tuskawilla Road driveway connection. The site has also been included in permitting for its outfall to the west under Permit No. 97490-1. Stormwater runoff from the proposed site will be managed via exfiltration trench and dry retention pond which drain into an onsite wet detention pond. These systems will meet or exceed all requirements of SJRWMD and the City of Winter Springs.

2 EXISTING CONDITIONS

The property is currently undeveloped and vacant. Per the FEMA FIRM located in **Appendix A**, the site is considered "Zone X – Area determined to be outside the 0.2% annual chance floodplain." Based on existing SJRWMD permitting and topographic data collected via survey, there is a high point ridge through the middle of the site. As a result, the site discharges to the east and west. SJRWMD Permit No. 83445-1 covers the existing allowable discharges to the east. SJRWMD Permit No. 97490-1 covers the allowable discharges from the site to the west.

2.1 SOILS

ECS Florida, LLA (ECS) has performed a geotechnical report for the proposed site. Please refer to the Preliminary Geotechnical Engineering Report prepared by ECS, dated November 15, 2018, which has been included in this application submittal, for details. The SCS Soil Survey for the proposed site can be found in **Appendix A** of the Drainage Calculations.

2.2 GROUNDWATER

The groundwater levels were investigated and determined by ECS and are included as part of their Geotechnical Report. Please refer to the Geotechnical Report prepared by ECS (dated November 15, 2018), which has been included with this submittal.

The table below summarizes the groundwater elevations obtained for each boring based on the provided geotechnical report by Terracon. Based on these results, Terracon estimates the seasonal high groundwater level to be at a depth ranging from 2.5 to 5 ft below existing grade across the site.

2.3 WETLANDS

There are no wetland impacts proposed for this project.

2.4 EXISTING DRAINAGE

Stormwater management systems are not provided for the currently undeveloped portion of the site. The Jesup's Reserve SJRWMD Permit (No. 97490-1) included the flows from the western portion of the site in their ultimate design of the 30" HDPE storm sewer trunk line. This 30" HDPE trunk line runs along the western site boundary and flows into wetlands located west of the site.

The Walgreens Drug Store #6575 SJRWMD Permit (No. 83445-1) determines the flows from the existing abandoned facility located at the eastern corner of the site. Flows from this portion of the site are captured within a dry retention pond within this abandoned parcel. The dry retention pond drains via a 150-ft 12" VPP discharge line to a drainage manhole just south of the abandoned parcel's driveway. Refer to the USGS Quad Map in addition to the pre-condition basin maps from each of these permits in ***Appendix A***.

2.4.1 BASINS

The property consists of two (2) basins. One basin drains west towards existing wetlands. The other basin drains east to the FDOT SR 434 right of way. Refer to Table 2 below for the pre-development basin summary and the Pre-Development Drainage Basin Map located in **Appendix A** for details.

**This basin's data is based on SJRWMD Permit No. 97490-1

2.4.2 CN CALCULATIONS

The pre-development CN calculations utilized for the pre-development basins can be found in ***Appendix B***.

2.4.3 TIME OF CONCENTRATION

The time of concentration ('Tc') calculations utilized for the pre-development basins can be found in ***Appendix B***.

2.4.4 TAILWATER CONDITION

Tailwater conditions are based on the existing SJRWMD data provided in Permit No. 83445-1 previously permitted for the site. "Node 99" within this permit utilizes stages of 40 (NGVD) at hour Zero and 41 (NGVD) at hour 24. These values have been converted to NAVD using the 1.056-ft conversion factor for the area. See ***Appendix B*** for the associated permit data.

2.4.5 EXISTING DEVELOPMENT RUNOFF

The stormwater runoff from the pre-development basins is based on the existing SJRWMD data previously permitted for the site. Please refer to ***Appendix B*** for the historic permit data utilized to calculate pre-development flows for the site.

3 PROPOSED CONDITIONS

The 10.23-acre Winter Springs Marketplace project consists of six (6) commercial buildings and associated surface parking and utility infrastructure. The eastern corner of the project is reserved for future commercial usage. The stormwater runoff from the proposed site will be managed via exfiltration trench and dry pond which drain into an onsite wet detention pond to provide adequate water treatment (quality) and attenuation (quantity) volumes. The stormwater management system has been designed to meet or exceed the requirements of the City of Winter Springs and St. John's River Water Management District (SJRWMD).

3.1 REQUIRED PERMITS AND REVIEWS

- City of Winter Springs, FL
- St. John's River Water Management District (SJRWMD)

3.2 BASINS

Proposed conditions will divide onsite basins into sub basins for each of the exfiltration trenches throughout the site. The back of the site along Natures Way (Basin A) will drain into the dry retention pond at the back of the site. The wet detention pond at the front of the site along Tuskawilla Road sits within its own basin (Basin B). All onsite basins ultimately drain through this basin before draining offsite.

The remaining basins consist of the onsite exfiltration trench throughout the site. The delineation between each of the exfiltration trench basins (Basins C through G) are based on the surface grading which determines the greatest areas generating runoff to each system. Basin C includes the future commercial parcel which is assumed to have 80% impervious area. Basins H through J are the parking areas at the center of the site which must first drain into retention swales before draining into the exfiltration trenches. Table 3 below provides an on-site post-development basin summary. See **Appendix A** for the Post-Development Drainage Basin Map.

3.2.1 CN CALCULATIONS

The CN calculations for the post-development conditions can be found in ***Appendix C***.

3.2.2 TIME OF CONCENTRATION

The time of concentration ('Tc') calculations for the post-development drainage basins was determined to be the minimum of 10 minutes. Please refer to the Post-Development Drainage Basin Map in **Appendix A**.

3.2.3 SEASONAL HIGH WATER TABLE AND CONTROL ELEVATIONS

Seasonal High Water Table (SHWT) elevations were determined using the Geotechnical Report provided by ECS, which has been included with this submittal for details. Based on the provided ECS Report, the estimated seasonal high water table elevation occurs within 2.5 to 5-ft below existing grade.

3.3 STORMWATER MANAGEMENT

Stormwater runoff for the proposed Winter Springs Marketplace property will be treated and attenuated through the use of off-line exfiltration trenches and a dry pond along with a wet detention pond which ultimately receives all on site flows prior to discharging. Runoff from the on-site post-development basins will sheet flow into the proposed inlets which will route flows to the exfiltration trenches and dry retention ponds. See **Appendix C** for the exfiltration trench, dry retention pond, and wet detention pond calculations.

Dry retention pond SMA-A will utilize a Type D control structure to route flows to wet detention pond SMA-B. Wet retention pond SMA-B will utilize Type E boxes to discharge to the offsite outfalls. The exfiltration trenches will utilize a diversion box near pond SMA-B along with weir structures to intermediate manholes to outfall to the wet detention pond. The parking lot swales utilize Type D boxes with elevated tops to convey flows from the swales to the exfiltration trenches. See Table 4 below for a summary of the controls structures proposed for the site.

*The secondary outfalls within the exfiltration trenches are 18-inch CMP which tie into the bottom elevation of each trench system at 42.0-ft and connect to the secondary outfall manhole at their associated weir elevations.

3.3.1 TAILWATER CONDITIONS

The tailwater conditions for the post-development condition are the same as the pre-development condition. Please refer to Section 2.4.4.

3.3.2 WATER QUALITY (TREATMENT VOLUME)

Offline exfiltration trenches, dry retention ponds, and dry retention swales interconnected with a wet detention pond are utilized as the Best Management Practice (BMP) to reduce the discharge of pollutants associated with stormwater runoff. Due to the site's ultimate discharge to Lake Jessup, the volume required for the removal of phosphorous is a third criteria used in finding the required water quality volume. The following standards were utilized for the treatment volume requirements for off-line exfiltration trenches.

The greater of:

0.5 inch of runoff over the site (SJRWMD)

OR

1.25 inches of runoff over the impervious area (SJRWMD)

OR

Inches of runoff over basin area provided in BMPTrains analysis (SJRWMD)

***** Impervious area does not include pond surface area.

****** Remainder of required volume is provided within interconnected exfiltration system SMA-G.

******* This system holds volume for nutrient removal pretreatment. Treatment volume in accordance with SJRWMD Applicant's Handbook (Vol. 2) Section 8.2 is provided within SMA-G.
******** SMA-G provides additional nutrient removal pre-treatment volume and attenuation. Basins flowing through this system have previously met nutrient removal criteria. The additional volume provided within this system assists interconnected SMA-C, H, I, & J in meeting presumptive criteria treatment volume.

The following standards were utilized for the treatment volume associated with incidental areas draining to interconnected wet ponds A and B.

The greater of:

1.0 inch of runoff over the site (SJRWMD)

OR

2.5 inches of runoff over the impervious area (SJRWMD)

*Impervious area does not include pond surface area.

** SMA B provides treatment for Basins B & G.2 in accordance with Section 8.2 of the SJRWMD Applicant's Handbook (Vol. 2).

As shown in the Tables 5 & 6 above, the provided Treatment Volume is greater than the required Treatment Volume per SJRWMD criteria. Please see **Appendix C** for treatment volume calculations.

3.3.3 WATER QUALITY VOLUME RECOVERY (BLEED DOWN)

Per SJRWMD criteria, the dry retention areas are required to provide the capacity for the appropriate treatment volume within 72-hours following a storm event. The wet pond is required to drawdown one-half of its required treatment volume within 24 to 30 hours following a storm event, but no more than half in the first 24 hours. Refer to the tables below for summary of permeability constants used with the exfiltration drawdown analysis.

Table 7: Design Permeability Rates

K (Horizontal) ft/day	K (Vertical) ft/day
51	17*

**Value includes safety factor of 2*

Recovery time was determined utilizing Advanced Interconnected Channel & Pond Routing (ICPR Ver. 4.04.00). As designed, the proposed dry retention ponds will drawdown the required water quality volume in less than 72 hours. The wet ponds will drawdown the volume within the 24 to 30 hour period provided in SJRWMD criteria. See **Appendix E** for supporting recovery analysis and results.

3.3.4 PROPOSED DEVELOPMENT RUNOFF

The stormwater runoff from the post-development basins was determined using Advanced Interconnected Channel & Pond Routing (ICPR Ver. 4.04.00) by Streamline Technologies, Inc. Please refer to ***Appendix A*** for the nodal exhibit and ***Appendix D*** for the input report and summary of results.

Please refer to the table below for a summary of the pre- vs. post- development peak discharge rates (Q) and the resulting maximum stage within the proposed BMP.

3.3.5 MINIMUM BUILDING FINISHED FLOORS (100-YEAR STORM EVENTS)

As required by SJRWMD ERP Applicants Handbook (Volume II), all building finished floor elevations must be designed to be above the pond design high elevation of the 100 year storm event. Please refer to Table 7 below for a summary of the design high water elevations for the 100-year storm events.

As demonstrated, all building finished floor elevations are established above the recommended elevations.

3.4 NUTRIENT LOADING ANALYSIS

A nutrient loading analysis was performed to provide a pre- versus post- nutrient loading analysis to show that the proposed development does not add to the impairment of the receiving water body by increasing the post-development nitrogen and phosphorus annual mass loading.

The requirements dictated by SJRWMD are that the post-development nutrient loading rate will not be greater than the pre-development loading rate. The proposed stormwater systems utilize a combination of exfiltration trench, dry retention pond, and dry retention swales in series with a wet detention pond to treat and attenuate post-development runoff.

The resulting PRE-development annual mass loading rates were calculated to be:

	Pre-Development Nitrogen Loading Rate (kg/year)	Pre-Development Phosphorous Loading Rate (kg/year)		Pre-Development Nitrogen Loading Rate (kg/year)	Pre-Development Phosphorous Loading Rate (kg/year)
BASIN A & G.1	0.176	0.058	**BASIN F**	0.565	0.188
BASIN B	0.062	0.021	**BASIN G.2**	0.019	0.006
BASIN C	3.134	1.041	**BASIN H**	0.470	0.156
BASIN D	0.521	0.173	**BASIN I**	0.145	0.048
BASIN E	0.224	0.074	**BASIN J**	0.018	0.006

The resulting POST-development annual mass loading rates were calculated to be:

	Post-Development Nitrogen Loading Rate (kg/year)	Post-Development Phosphorous Loading Rate (kg/year)		Post-Development Nitrogen Loading Rate (kg/year)	Post-Development Phosphorous Loading Rate (kg/year)
BASIN A & G.1	5.096	0.848	**BASIN F**	3.161	0.526
BASIN B	1.036	0.172	**BASIN G.2**	2.632	0.438
BASIN C	12.149	2.021	**BASIN H**	2.547	0.424
BASIN D	3.206	0.533	**BASIN I**	1.603	0.267
BASIN E	1.790	0.298	**BASIN J**	2.119	0.352

Based on the pre- vs. post- development loading rates, the treatment systems have been sequenced in the following order to provide the removal efficiencies needed.

BMPTrains System Routing						
Catchment 8 (SWALE 1)	↘	Catchment 3 (SMA-C)	↘			
Catchment 9 (SWALE 2)	→	Catchment 7 (SMA-G)	↘			
Catchment 10 (SWALE 3)	↗	Catchment 4 (SMA-D)	→	Catchment 2 (SMA-B)	→	OUTLET
		Catchment 5 (SMA-E)	↗			
		Catchment 6 (SMA-F)	↗			
				Catchment 1 (SMA-A.1 & A.2)	→	OUTLET

As shown in the table above, Basin A drains into Basin B's wet detention for further nutrient removal. Basin C through Basin G route through Basin B's wet detention pond for further nutrient removal. Basin H through Basin J pass through Basin G and Basin B for additional nutrient removal. See ***Appendix C*** for the removal efficiencies of each of the individual systems. The summary report within ***Appendix C*** provides the overall removal efficiency of the site given the sequence in which drainage must flow before it is discharged from the site. The table below provides the summary of the sites overall removal efficiency.

	Nitrogen Loading Rate (kg/year)	Nitrogen Removal Efficiency (%)	Phosphorous Loading Rate (kg/year)	Phosphorous Removal Efficiency (%)
Target	5.33	85%	1.771	70%
Provided	4.59	87%	0.472	92%

As designed, the proposed BMPs provide sufficient removal of the resulting post-development nitrogen and phosphorus nutrient loading. Please refer to Appendix C for the loading calculations, per BMP Trains 2020 Ver. 2.1.

3.5 CONCLUSION

This Drainage Analysis demonstrates the proposed improvements and design of the proposed stormwater management system(s) meet or exceeds all the requirements of the St. John's River Water Management District (SJRWMD) and the City of Winter Springs.

SURVEYOR'S CERTIFICATE

To:
NTR DEVELOPMENT, INC.:

This is to certify that this map or plat and the survey on which it is based were made in accordance with the "Minimum Standard Detail Requirements for ALTA/ACSM Land Title Surveys," jointly established and adopted by ALTA, ACSM and NSPS in 1999, and includes items 1, 2, 3, 4, 5, 7(a), 7(b), 7 (c), 8, 10, and 11(a), of Table A thereof. Pursuant to the Accuracy Standards as adopted by ALTA, NSPS and ACSM and in effect on the date of this certification, undersigned further certifies that proper field procedures, instrumentation, and adequate survey personnel were employed in order to achieve results comparable to those outlined in the "Minimum Angle, Distance, and Closure Requirements for Survey Measurements Which Control Land Boundaries for ALTA/ACSM Land Title Surveys".

DESCRIPTION

PARENT TRACT

THAT PART OF THE UNPLATTED PART OF BLOCK B OF D.R. MITCHELL'S SURVEY OF THE LEVY GRANT, ACCORDING TO THE PLAT THEREOF AS RECORDED IN PLAT BOOK 1, PAGE 3 OF THE PUBLIC RECORDS OF SEMINOLE COUNTY, FLORIDA, DESCRIBED AS FOLLOWS:

BEGINNING AT A POINT 185 FEET NORTH 38°45' WEST OF THE MOST EASTERLY CORNER OF THAT PART OF SAID BLOCK B LYING SOUTHWEST OF THE SANFORD ORLANDO ROAD AND RUNNING NORTH 38°45' WEST 200 FEET ALONG THE WESTERLY LINE OF THE SANFORD OVIEDO HIGHWAY; THENCE SOUTH 51°15' WEST 710.14 FEET; THENCE SOUTH 22°15' EAST 208 FEET; THENCE NORTH 51°15' EAST 770 FEET TO THE POINT OF BEGINNING. ALSO DESCRIBED AS LOT 8 ACCORDING TO JOE E. JOHNSTON'S SURVEY AS RECORDED IN DEED BOOK 147, PAGE 221, SEMINOLE COUNTY, FLORIDA.

LESS THAT PORTION OF PARCEL 130 IN ORDER OF TAKING IN OFFICIAL RECORDS BOOK 2831, PAGE 1024 THAT LIES WITHIN ABOVE DESCRIBED PROPERTY.

THAT PART OF THE UNPLATTED PART OF BLOCK "B" OF MITCHELL'S SURVEY OF THE LEVY GRANT DESCRIBED AS BEGINNING AT THE MOST EASTERLY CORNER OF THAT PART OF SAID BLOCK "B" LYING SOUTHWEST OF THE SANFORD-OVIEDO HIGHWAY AND RUNNING NORTH 38°45' WEST 186.0 FEET ALONG THE WESTERLY LINE OF THE WAY OF THE SANFORD-OVIEDO HIGHWAY; THENCE SOUTH 51°15' WEST 770.0 FEET; THENCE SOUTH 22°15' EAST 13.5 FEET TO THE SOUTHWEST CORNER OF THE UNPLATTED PART OF BLOCK "B"; THENCE EAST ALONG THE NORTH LINE OF TUSCAWILLA A DISTANCE OF 497.0 FEET; THENCE NORTH 30° EAST 420.0 FEET TO THE POINT OF BEGINNING.

ALSO DESCRIBED AS LOT 9, ACCORDING TO JOE E. JOHNSTON'S SURVEY AS RECORDED IN DEED BOOK 147, PAGE 221, PUBLIC RECORDS OF SEMINOLE COUNTY, FLORIDA.

LESS THAT PART OF PARCEL 130 IN ORDER OF TAKING IN OFFICIAL RECORDS BOOK 2831, PAGE 1024, PUBLIC RECORDS OF SEMINOLE COUNTY THAT LIES WITHIN ABOVE DESCRIBED PROPERTY.

TOGETHER WITH THAT PORTION OF VACATED ROAD LYING SOUTHERLY OF ABOVE DESCRIBED PROPERTY AS DESCRIBED IN OFFICIAL RECORDS BOOK 2972, PAGE 373, PUBLIC RECORDS OF SEMINOLE COUNTY.

TOGETHER WITH THAT PART OF LOT 8, BLOCK A, LYING WESTERLY OF TUSKAWILLA ROAD, OF D.R. MITCHELL'S SURVEY OF THE LEVY GRANT ACCORDING TO THE PLAT THEREOF AS RECORDED IN PLAT BOOK 1, PAGE 5 OF THE PUBLIC RECORDS OF SEMINOLE COUNTY, FLORIDA.

AND THAT PART OF LOT 8, BLOCK A, D.R. MITCHELL'S SURVEY OF THE LEVY GRANT, ACCORDING TO THE PLAT THEREOF AS RECORDED IN PLAT BOOK 1, PAGE 5, PUBLIC RECORDS OF SEMINOLE COUNTY, FLORIDA, LYING WESTERLY FROM THE WESTERLY FIFTY FEET FROM THE CENTER LINE OF TUSKAWILLA ROAD, AS RECORDED IN O.R.B 2860, PAGE 510, SEMINOLE COUNTY, FLORIDA.

TOGETHER WITH

LOT 7, JOE E. JOHNSTON'S SURVEY RECORDED IN DEED BOOK 147, PAGE 221, PUBLIC RECORDS OF SEMINOLE COUNTY, FLORIDA. ALSO BEING THAT PART OF THE UNPLATTED PART OF BLOCK B OF D.R. MITCHELL'S SURVEY OF THE LEVY GRANT ACCORDING TO THE PLAT THEREOF AS RECORDED IN PLAT BOOK 1, PAGE 5, PUBLIC RECORDS OF SEMINOLE COUNTY, FLORIDA, DESCRIBED AS BEGINNING AT A POINT 386 FEET NORTH 38 DEGREES 45 MINUTES WEST OF THE MOST EASTERLY CORNER OF THAT PART OF SAID BLOCK B LYING SOUTHWEST OF THE SANFORD-OVIEDO ROAD AND RUNNING NORTH 38 DEGREES 15 MINUTES WEST, 200 FEET ALONG THE WESTERLY LINE OF THE SANFORD-OVIEDO ROAD; THENCE SOUTH 51 DEGREES 15 MINUTES WEST 650.30 FEET; THENCE SOUTH 22 DEGREES 15 MINUTES EAST 208.8 FEET; THENCE NORTH 51 DEGREES 15 MINUTES EAST 710.14 FEET TO THE POINT OF BEGINNING. LESS AND EXCEPT THAT PART TAKEN FOR POND RIGHT OF WAY BY THE ORDER OF TAKING RECORDED JULY 21, 1994, IN OFFICIAL RECORDS BOOK 2803, PAGE 1001, PUBLIC RECORDS OF SEMINOLE COUNTY, FLORIDA.

CONTAINS 448,300 SQUARE FEET OR 10.292 ACRES MORE OR LESS.
